DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to an a system for binarizing target pixels in an image based on relational pixel(s) that satisfy both a relative and absolute condition, in order to detect patterns in the image, classified in class 382, subclass 165.
 - II. Claims 13-21, drawn to a system for binarizing target pixels in an image based on a threshold value, which is selected from a plurality of stored values, in order to detect patterns in the image, classified in class 382, subclass 270.
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I (corresponding to Embodiment 1) calls for binarizing a target pixel based on relational pixel(s) that satisfy both a relative and absolute condition. Invention II (corresponding to Embodiment 2) calls for binarizing a target pixel based on a threshold value, which is selected from a plurality of stored values. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
